

Firefly Mobile Protect

POWERED BY CORRATA

Mobile threat defense, content filtering, and data control without the complexity and compromises found in competing solutions.

What Is Firefly Mobile Protect?

Businesses worldwide lose \$17,700 every minute because of phishing attacks, according to Corrata. Firefly Mobile Protect is the best way to keep your employees' mobile devices secure. Get protection from phishing, malware, and other malicious content with Corrata's powerful solutions:

Security

- Block access to phishing sites, malware download sites, and other risky, offensive, or inappropriate content.
- Detect and disable malware and other zero day attacks with advanced detection and response.
- Implement acceptable use policies and discover and control usage of cloud services with robust web filtering and cloud app control.

Data Control

- Set per-device caps for domestic and roaming usage tailored to the needs of your organization.
- Blacklist high bandwidth, non-business applications such as social media or video streaming apps.
- Enforce your organization's acceptable usage across all your devices, not just your desktops.

Your Best Option for Mobile Security

Firefly Mobile Protect allows you to:

- Gain complete visibility and control over threats to your device's security with an enterprise-grade firewall.
- Avoid privacy, confidentiality, and performance compromises with a zero gateway solution.
- Enjoy flexible deployment – Corrata can be deployed on a standalone basis, or integrated with your IT stack.
- Ensure previously undocumented phishing and malware threats are disabled thanks to smart policy protection.

FirstNet Verified

With Firefly Mobile Protect, first responders are protected from the full range of phishing, malware, and other malicious cyber threats on smartphones and tablets.
